
PROMINENT FRONTRUNNERS

This list tracks hikers from all over the globe who have impressive hikes/climbs of peaks with high prominence.

Hopefully it helps to popularize prominence based hiking. If you know of someone not listed that deserves recognition, please let us know.

Compiled by Andy Martin.
Email oldadit @ gmail.com with updates/revisions.

List is online at: <http://oldadit.googlepages.com/FRL.txt>

Current as of December 31, 2008.
** = info added after December 31.

Prominence is also known as "shoulder drop" in the USA, or just "drop" in England. It is defined as the elevation difference between a peak and the lowest contour that encircles it and no higher summit. See the Prominence section on www.cohp.org and the prominence site www.peaklist.org for further discussions on why prominence is a useful way to measure mountains.

Ludwig Purtscheller ? 1700 peaks:
http://en.wikipedia.org/wiki/Ludwig_Purtscheller
 unknown 1,000+? a few New England Hikers
 They use 200' drop in N.E., makes it tough
 to accurately count the 300' drop peaks

Note that half a contour interval can be added at unmarked summits and saddles. Thus an unmarked peak showing 7 full contour intervals of 40 feet (same as 8 actual rising contour lines between saddle and summit) can also add 20 feet for an interpolated summit height, and 20 feet more drop for the saddle, giving expected drop of 320', and we assume this peak meets the 300' drop criteria.

Another way of stating this - assuming 40' contour intervals, the calculation formula should be $40 \times N$, where N is the number of contour above the saddle. This assumes summit and saddle elevations are not available.

We realize that 7 full contour intervals of 40 feet does not give a proven 300 foot prominence, as we are requiring for 2K and 5K peaks.

However, the 7 contour interval standard was in existence for 300' summits well before this FRL, so we continue to use it for historical reasons.

Per Alan Dawson, out of 1553 Marilyns, only 179 are in England, 156 are in Wales, 1214 are in Scotland and 5 are on the Isle of Man (one is joint English/Welsh). There are an additional 453 Marilyns on the whole island of Ireland, as listed by Clem Clements. Marilyns have 150 meter (492') drop.

6). Speed Records & Streaks

NOTE: Records where driving plays a major part are not listed. Human powered feats are preferred. Speed records are not intended to encourage reckless activities, or speeding tickets. Notably -
 1. Do not drive too fast.

2. Always ask permission if public access is not clear.
3. Do not drive when you are overly tired.
4. Do not engage in switchback cutting and other undesirable hiking practices.

Peaks in a day.

Rules: Up to 24 hours time span (may cross calendar days).
Ground/water travel is allowed, mechanized air travel is not.

10) Japan - I need help on this section from anyone who has
info on Japanese Prominence hiking feats - thanks - Andy

The 21 Japanese Ultras are listed at
<http://www.peaklist.org/WWlists/ultras/japan.html>
Per the list:

"All of these summits are included on the list of Japan's 100 Famous
Mountains,

the Nihon Hyaku-Meizan by Kyuya Fukada"

A wiki on the Hyaku-Meizan is at

http://en.wikipedia.org/wiki/List_of_the_100_famous_mountains_in_Japan
it mentions:

"people who have made a goal of reaching the summit of every mountain
on the list have appeared in great numbers"

We can expect there are tens, and perhaps hundreds of Hyaku-Meizan
list completers, and thus Japanese Ultra completers.

The current speed record for the Hyaku-Meizan is 66 days by Kazufumi
Hirata.

We can guesstimate that the Japanese top 50 prominence list
is completed, and considerable progress (accidental or on purpose)
has been made on the 100, 200, and 400 lists

NOTES

50! = all of the top 50 peaks climbed, 1 to 50

100! = all of the top 100 peaks climbed, 1 to 100

@ = after name for "club rules" completers who did not summit
peaks where no trespassing rules are currently in effect
all year long. In this case, the peak(s) that just missed
the cut are added to replace the one(s) where access
is prohibited. The peak(s) missing are listed in []

C. Mechanized transport.

Reaching or traveling close to a summit with assist of mechanized ground transport such as car, truck, 4wd, snow-cat, ski tram, cog RR, etc. is allowed in this FRL. Draft ground animal assist (horses, mules, llamas, etc) is allowed. All forms of water transport are allowed. This means that the Colorado Mountain Club guideline requesting a minimal 3000' vertical gain on the way up a peak is not used.

However, hikers are encouraged to record on their peak lists when mechanized transport was used. For example, on peaks that I used mechanized transport they are noted with:

AU = Drove auto close to top
AU+ = Auto + short walk
TK = Drove truck close to top
JP = Drove 4wd close to top
TRAM = Took cable tramway close to top
COGRR = Took cog RR close to top

Aerial modes of transport directly to the summit, or past standard base camps, are not allowed. This includes planes, choppers, hang gliders, parachutes, space shuttle, and other aerial modes of transport.

Descent from the summit with hang glider or parachute that you have carried up there carries no penalty.

D. Volcanic eruptions and other height changes

We note the pre-eruption prominence of Saint Helens was 5917', a good bit higher than the current 4605+.

Thus when Bob Bolton climbed Saint Helens he could claim both a "top 10" WA prominence ascent, and a top 50 lower 48 ascent. (Saint Helens was #28 in lower 48 prominence prior to May 18, 1980.)

Those who climb Saint Helens today can make neither of these claims.

The pertinent categories are

Lower 48 USA (the 50 best by prominence in lower 48)

and

The Worlds top 1000 by prominence

My take on these is:

Lower 48 USA - you can claim either
CA Lassen Peak Lassen Peak 31N4E 5,217+
or pre eruption Saint Helens as counting for this list,
but not both (No Bob, you can't claim 51 of Americas
50 finest by prominence).

The Worlds top 1000 by prominence
Pre-eruption Saint Helens ascents get credit for
full prominence at that time, thus Bob gets to count
this while those climbing the peak these days do not.

E. List errors.

If you complete a list that is later found to have errors, you are still a completer, and need not hike additional peaks. However, if you have not yet completed the list, you need to take the corrections into account.

This "Grandfather" rule is similar to the one used by the state High Pointers, and is designed to protect deceased and disabled completers.

Note that living completers (and ambulatory zombies :) should consider tackling the corrected list, in the FRL is ever overrun by purists.

F. What is a 2,000' prominence peak ?

For purposes of this FRL list a 2,000' peak is one proven to have at least 2,000' prominence, either by current and accurate maps, or by trustworthy survey data. Proven prominence is also referred to as "clean" prominence by some hikers.

This means that "maybe 2000' prominence" peaks are not counted for Century club totals.

For locations without accurate maps, additional data like hand held GPS readings, barometric readings, and satellite data may be used, as long as an adequate "safety factor" is employed.

This issue also comes into play on the category

\$ - Every 2000'P peak (proven prominence) in this region was climbed,
and the number listed is the total number of 2000'P peaks in this region. In the USA only states with 30 or more of these peaks are tracked.

This FRL does not require you to also hike every peak in a region that might have 2,000' prominence, once all uncertainties are resolved. However prudent hikers might wish to go ahead and hike these as well, in case this FRL ever falls into the hands of a purist.

G. Eligibility

Open to all humans on earth - past, present, and future.

FUTURE EXPANSION

This FRL could be expanded to include:

1. Add "possible" categories for 2,000', 5,000', etc. prominence.
2. County prominence completions - contact Edward Earl
3. All 2000' completions in states with 10 or more of these (would open up several eastern states)
4. Mechanized speed records
5. Radius from home categories - with and without Canada and Mexico peaks in consideration.
6. Hikes of 1000 meters, 4000', etc prominence.
7. etc, etc.

However, a list maintainer will have to be found for these, or Andy's salary will have to be increased.
